Lingua ex Machina: Computer-Mediated Communication and the Trend of Babel

David J. Bunker

We're finally received the damage done by the Trend of Babel, and Con is, to everything what we're going to be on its wave.

The "Trend of Babel" (Babel/17 1.1) is a fictional phenomenon that emerges in the science fiction novel Babel/17 (1966) by Samuel R. Delany. The Trend of Babel is a linguistic phenomenon that is described as a "virus" (Babel/17 1.1) that is "spread" (Babel/17 1.1) by "contact" (Babel/17 1.1) and that "infects" (Babel/17 1.1) its victims. The Trend of Babel is a linguistic virus that is described as "a language that is not a language" (Babel/17 1.1).
