## ▶ Net Neutrality

## Sorry, we're stuck in the slow lane.

Well, not yet. Cable companies want to get rid of net neutrality, so they can slow sites like ours to a crawl and shake us down for extra fees just to reach you. If they get their way, the Internet will never be the same. We can stop them and keep the web fast, open, and awesome if we all contact Congress and the FCC, but we only have a few days left.

- ▶ Big differences in the user experience across the globe

# Review

- ▶ United States

- ▶ Dispute over Legal Classification

- Net neutrality in the United States has been a point of conflict between network users and service providers since the 1990s. Much of the conflict over net neutrality arises from how Internet services are classified by the Federal Communication Commission (FCC) under authority of the *Communications Act of 1934*.

# Review

- ▶ US Federal Law

- ▶ Congress = Make law

- ▶ *Communications Act of 1934*

- ▶ Law covering “new media” (i.e. radio, telephone, etc.)

- ▶ Revised and updated in the 1990’s

- ▶ Administrative agencies – FCC

- ▶ Interpret and administer the law

- ▶ Issue official statements called “administrative rules”

# Review

## ▶ Communications Act of 1934

### **Title I – Info Service**

- More regulation
- Radio & Television
- Content controls

### **Title II – Common Carrier**

- Limited regulation
- Telecommunications
- Public Utilities

Because the Communications Act has not been amended by the US Congress to account for Internet Service Providers (ISPs), the FCC has the authority to designate how ISPs should be treated in addition to what regulations they can set on ISPs.

# Review FCC Flip-Flop

## **Title I – Info Service**

- More regulation
- Radio & Television
- Content controls

## **Title II – Common Carrier**

- Limited regulation
- Telecommunications
- Public Utilities

# Review

## ▶ Outcome & Results

### ▶ Inconsistency

- ▶ Every new presidential administration will produce different administrative rules from the FCC
- ▶ Some will favor net neutrality others will not

### ▶ The Fix

- ▶ Congress would need to revise the law to decide the status of ISPs
- ▶ If this subject is important to you, voting matters; check your candidate's tech policy

## Digital differences

While increased internet adoption and the rise of mobile devices have brought many gaps in technology access over the past decade, disparities still remain.

### Offline Innovation: Bridging the Digital Divide in Latin America

with  
Maria Gonzalez, SIPA MPA-DP '18 and  
Dr. Sam Zidovetzki, Mount Sinai Hospital Icahn School of Medicine

The Wikipedia Project for Offline Education in Medicine (POEM) uses an "Internet-in-a-Box" device to store a vast digital library of medical resources. It can operate without electricity and broadcast up to 30 users at a time, making it ideal for clinics in Latin America and beyond that lack consistent electricity. Last spring, two teams of Mount Sinai physicians and students surveyed health practitioners in the Dominican Republic. POEM has great potential. In the summer, a pilot study was conducted there and additional assessments were carried out in Guatemala.

ARTICLE

## Second thoughts: toward a critique of the digital divide

DAVID J. GUNKEL

*Department of Communication, Northern Illinois  
University*

### Abstract

This article introduces critical perspective into the discussion of the digital divide, which is commonly defined as the gap separating those individuals who have access to new forms of information technology from those who do not. The analysis is distinguished from other undertakings addressing this matter, insofar as it does not document the empirical problems of unequal access but considers the terminology, logical structure, and form that define and direct work on this important social and ethical issue. The investigation employs the tools of critical theory and targets extant texts, reports, and studies. In this way, the analysis does not dispute the basic facts gathered in recent empirical studies of computer usage and internet access. On the contrary, its purpose is to assist these and other endeavors by making evident their common starting point, stakes, and consequences.

### Key words

computers • computers-social aspects • ethics • internet •  
technology • theory

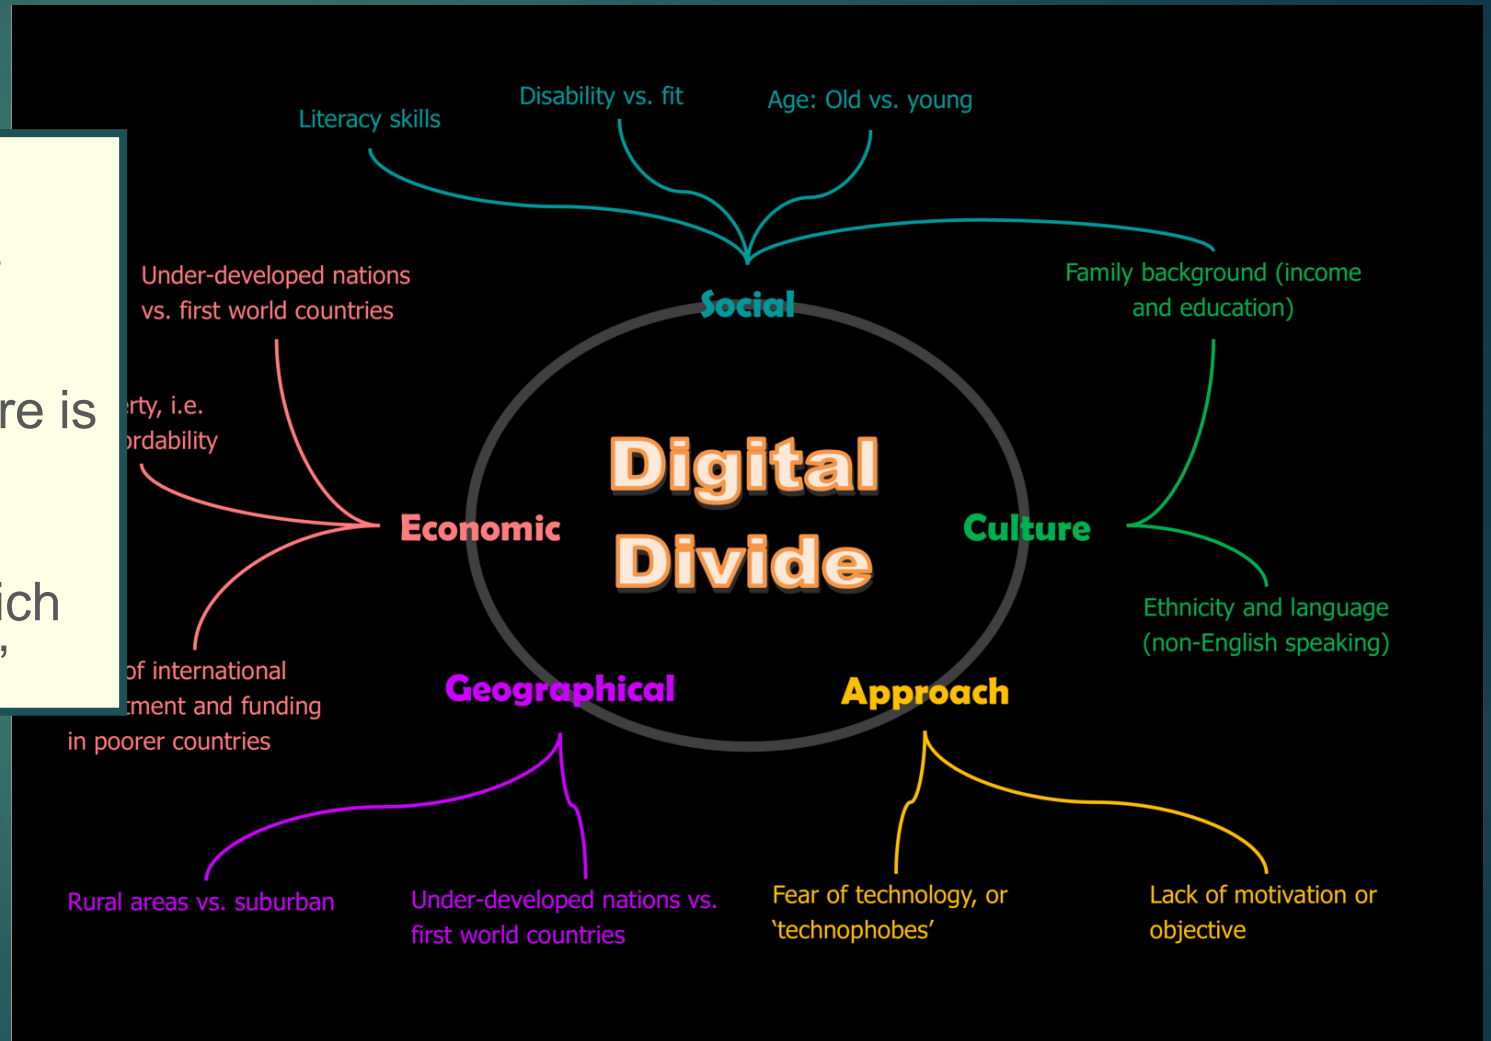

The term 'digital divide' has come to occupy a privileged position in recent debates about the internet, computer technology, and access to information systems. It has surfaced, in one way or another, in scholarly studies and

# Review

## 1. Definition

Usage of the term “digital divide” is neither consistent nor univocal

“There is not one digital divide; there is a constellation of different and intersecting social, economic, and technological differences, all of which are properly named ‘digital divide.’”

# Review

## 2. Structure

“Digital divide” divides the world into two opposing types: those who have access to information technology and those who do not.

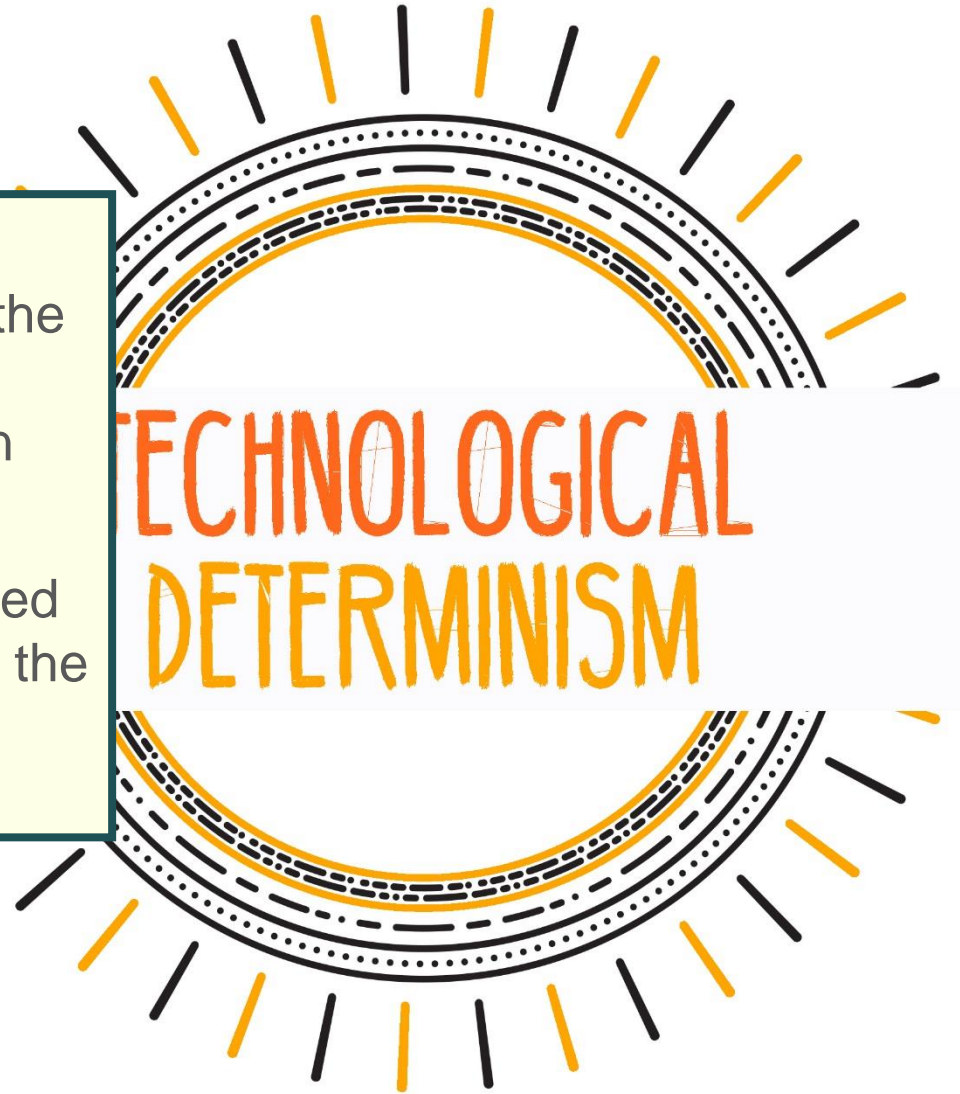

# Review

## 3. Form

Discussion of the digital divide often employs the theory of *technological determinism*—the idea that social change is affected by innovations in technology.

We study the digital divide because it is believed that information technology (i.e. computer and the Internet) will determine both our social and economic future.

<b>Educational attainment</b>		
No high school diploma	16	43
High school grad	33	71
Some College	62	88
College +	76	94

### Internet adoption over time

In 1995, only about one in 10 adults in the U.S. were going online.<sup>2</sup> As of August 2011, the U.S. internet population includes **78% of adults** (and **95% of teenagers**).<sup>3</sup> Certain aspects of the current internet population still strongly resemble the state of internet adoption in 2000, when [one of Pew Internet's reports](#) found that minorities, adults living in households with lower incomes, and seniors were less likely than others to be online. "Those who do not use the Internet often do not feel any need to try it, are wary of the technology, and others are unhappy about what they hear about the online world," the report concluded.<sup>4</sup>

## 3. Persistent/Complex Problem

MARCH 5, 2018

### 11% of Americans don't use the internet. Who are they?

BY MONICA ANDERSON, ANDREW PERRIN AND JINGJING JIANG

For many Americans, going online is an important way to connect with friends and family, shop, get news and search for information. Yet today, 11% of U.S. adults do not use the internet, according to a new Pew Research Center analysis of survey data.

The size of this group has changed little over the past three years, despite ongoing **government** and social service programs to encourage internet adoption in underserved areas. But that 11% figure is substantially lower than in 2000, when the Center first began to study the social impact of technology. That year, nearly half (48%) of American adults did not use the internet.

A 2013 **Pew Research Center survey** found some key reasons that some people do not use the internet. A third of non-internet users (34%) did not go online because they had no interest in doing so or did not think the internet was relevant to their lives. Another 32% of non-users said the internet was too difficult to use, including 8% of this group who said they were “too old to learn.” Cost was also a barrier for some adults who were offline – 19% cited the expense of internet service or owning a computer.

The Center's latest analysis also shows that **internet non-adoption** is correlated to a number of demographic variables, including age, educational attainment, household
